the Field of Electricity

with which state legislachise for utilizing the water power of Niagara falls, resulting in the development of electric power of far greater commercial time. Defenders of the free franchise system in this case point to the benefits conferred on the community in industrial progress, and the great advantages nearby communities, such as Buffalo, derive from cheaper power as sufficient compensation for the privilege granted. The argument serves its purpose in soothing discontent largely because the public has no immediate remedy. Our easy give-away methods, as illustrated at Niagara falls, serves to make a sharp contrast with the methods of the Canadian authorities in driving a bargain with electrical power companies on

the Canada side of the fails. The nineteenth annual report of the commissioners of Victoria park, the free pleasure ground on the Canadian side at Niagara, has much in it of interest to the industrial development on the New York section about the falls of Niagara, as well as to the Province of Ontario. In fact, the showing it makes as to what great power companies can afford to pay for the rights to develop power from a stream is of vital concern to every section of the country where water powers are available for development. The Canadian Niagara Power company has paid the commissioners the surprising sum of \$224,677.78, and today has only 30,000 horse-power available, its initial generator having been started on January I last. In time it will have 119,000 horse-power, but in addition to its annual rental will have to pay a tax on every horse- appear to be at a glance, but the number power developed above 10,000.

The Ontario Power company, the second to secure rights in the park, but which has no power yet developed, has paid \$110,000 to the commissioners. The Ontario Power company has located its power house at the water's edge in the gorge, and will tory. Six thous develop 180,000 horse-power, the first of ater signs alone. which will probably be ready for use this,

The maximum difference varies considerably with the conditions of workvalue than was considered possible at that ing, but it would appear that it rarely exceeds in degrees C. The results achieved will, it is hoped, enable the engineering standards committee to specify the conditions of tests for motors and generators in the future. A series of tests such as those described could only be carried out by the co-operation of a central institution such as the National Physical laboratory and the various makers who have supplied the machinery, and any value that the tests may have is greatly increased by this co-opera-

> New York's Night Signs. Broadway is made to

at night by electric lights There is nothing to equal this show in

any other city in the world. The electric signs play a big part in making Broadway the brightest street in the world at night.

Yet appearances are deceptive regard ing these electric lights. They are so conspicuous, so eye-filling, that there ap are. On Broadway between Twenty-third and Forty-fifth streets there are about fifty signs, averaging about two to a block. You'd think there were five times that number, so assertively do they stare and glare at you from everywhere. They neem to take up so much space, to be so

of incandescent lights used in them will strike the layman as being surprisingly small. Instead of a myriad of the small globes, there are in reality only 9,000 in round numbers in the signs in the territory. Six thousand of these are in the-

The telephone in America was a delight and a luxury which one feels all the more as soon as one returns to the miseries of the London system."

RELIGIOUS NOTES.

Rev. Frederick Bender, a wealthy priest f Denver, has decided to build a church t a cost of \$100.00, in a district of the city ow without church accommodations.

now without church accommodations.

Archishop Mesmer of Milwaukee has had to ask police protection ogalist the importunities of beggars, following an article in a local newspaper telling of his liberality as a giver.

Ex-Mayor Low of New York, who has become a religious enthusiast, is planning for great revival services under canvas. A number of rich men have joined with him and lave agreed so to finance the undertaking that the plate will not have to be passed at any of the meetings.

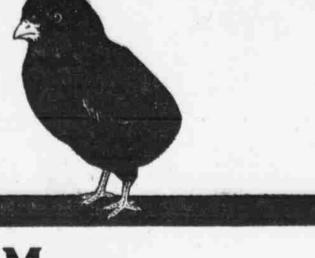

Rev. F. G. Brown, one of the editors of the Western Christian Advocate, has regigned and will re-enter the ministry. He will be succeeded by Rev. Robb Zaring of indianapolis.

The pastor of Holy Name Catholic church

The paster of Holy Name Catholic church of Sheboygan, Wis., is trying to stop promiseuous dancing by getting piedges from his 3,000 parishioners to attend only dances in the church hall.

Very Rev. M. F. Fallon of Buffalo, provinctal of the Oblite Fathers. Tas been in Washington, where he purchased fifteen acres of land for the purpose of creeting this summer a house of studies for the members of his order.

The late Thomas L. Clark, hishop of Rhode Island, widely known as a wit and scholar, in his own home life in Providence preferred the utmost simplicity compatible with comfort. Having on one occasion a distinguished English divine as a visitor, the latter was considerably impressed, not to say astonished, at the lack of ceremony observed in the Episcopal mansion, and upon retiring heritatingly inquired if he should leave his shoes outside his door. "Certainly, if you like," replied the bishop, with cordiality, "nobody it touch 'em."

At Peep of Morn---

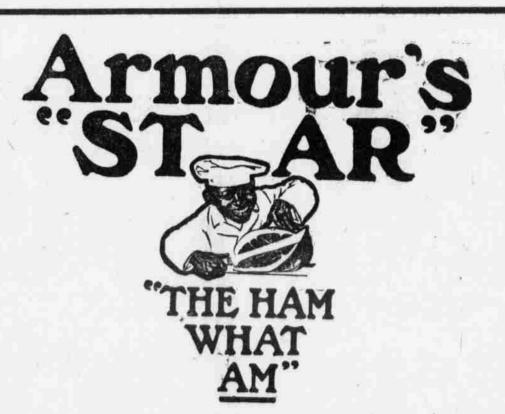

ITH hunger unborn He tempts his appetite With Armour's "Star" Ham, Cooked just right.

"Just right" means a slice of the juicy ham done to a turn with fresh eggs fried to your liking, tastefully garnished, and served sizzling hot.

Armour's "Star" --- "the ham of hams," carefully selected, scientifically cured---always of uniform, superior quality.

To insure getting Armour's ask the grocer to show you the star burned in the skin.

Nothing finer produced than Armour's Sliced "Star" Ham and Bacon neatly packed in 1 lb. tins. Convenient-economical. So trimmed that all waste is removed, and mechanically sliced much thinner than can be done by hand.

Married Every woman covets a shapely, pretty figure, and many of them deplore the women after marriage. The bearing of children is often destructive to the mother's shapeliness.

loss of their girlish forms after marriage. The bearing of children is often destructive All of this can be avoided,

however, by the use of Mother's Friend before baby comes, as this great liniment always prepares the body for the strain upon it, and preserves the symmetry of her form. Mother's Friend overcomes all the danger of child-birth, and carries the expectant mother safely through this critical period without pain. It is woman's greatest blessing. Thousands gratefully tell of the benefit and relief derived from the use of this wonderful

druggists at \$1.00 per bottle. Our little book, telling all about this liniment, will be sent free.
